

URANIUM FEVER

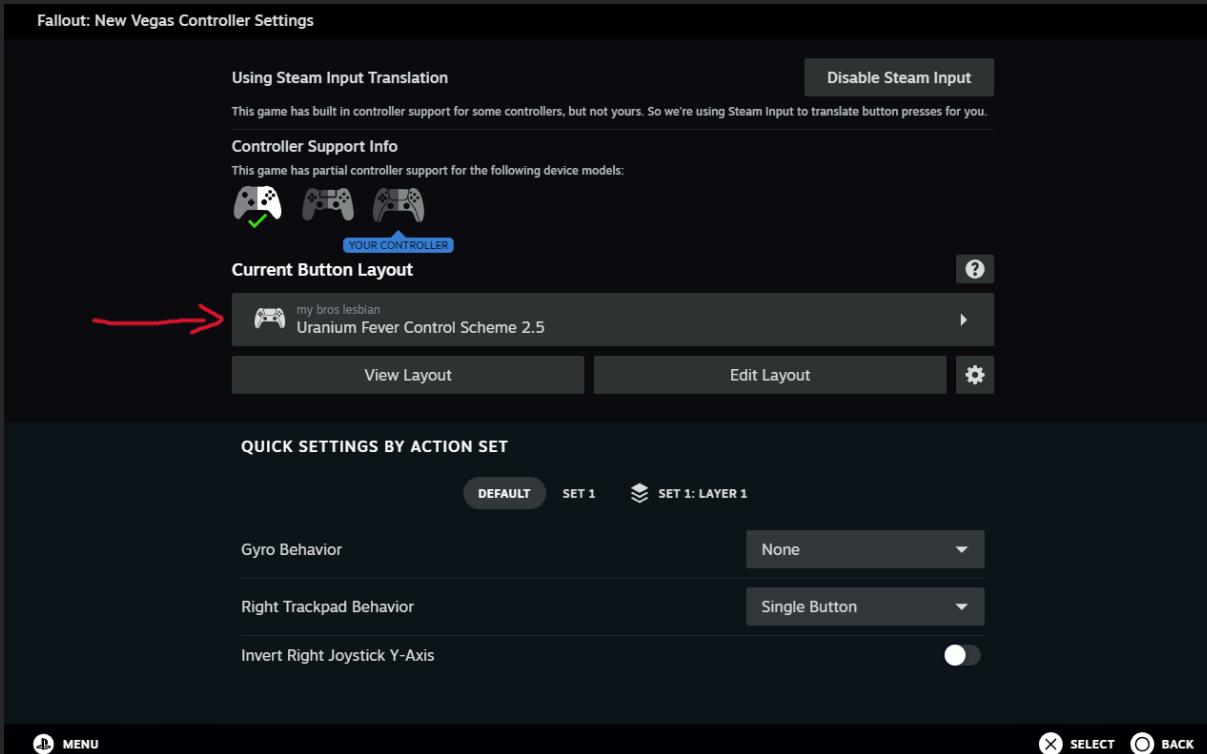

CONTROLLER INSTRUCTIONS

- Turn on controller and make sure it is detected by Windows as the controller type it is, not a generic gamepad. (Xbox controller, Dualsense controller, DS4 controller, etc)
- Navigate to Steam library and select Fallout: New Vegas

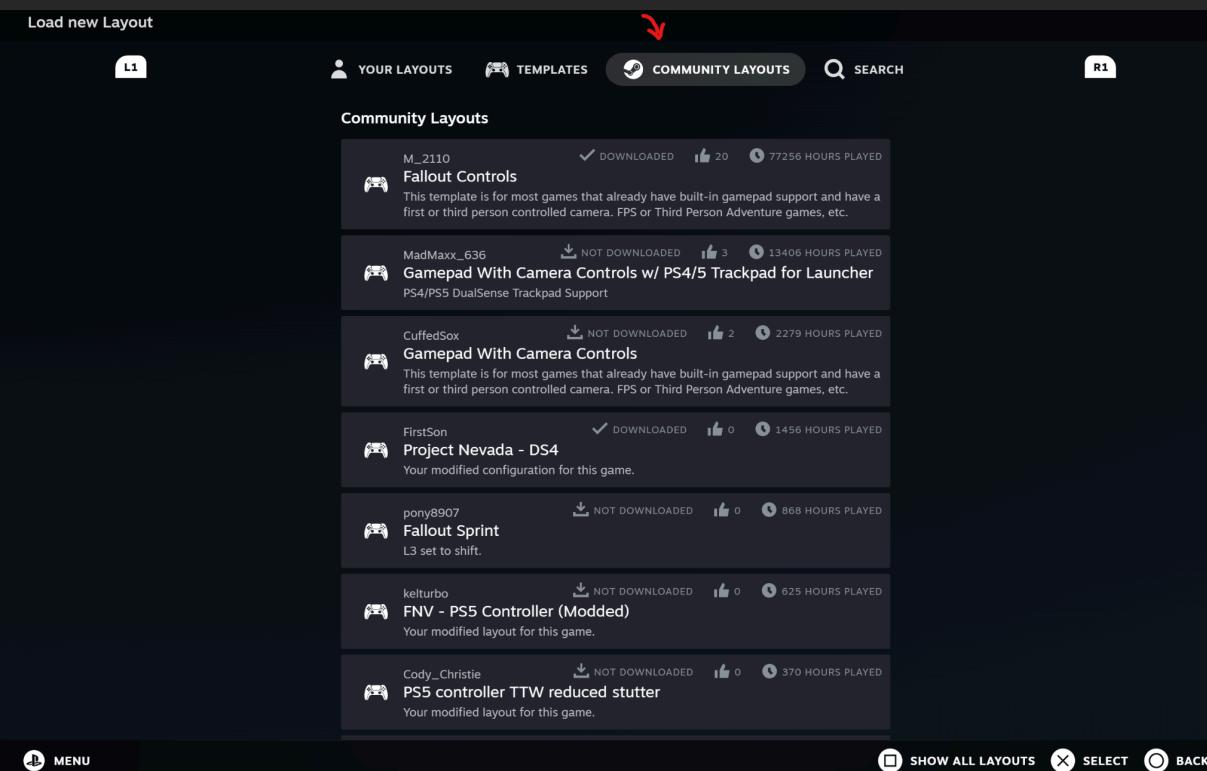

Click on the controller icon  on the right hand of the page:

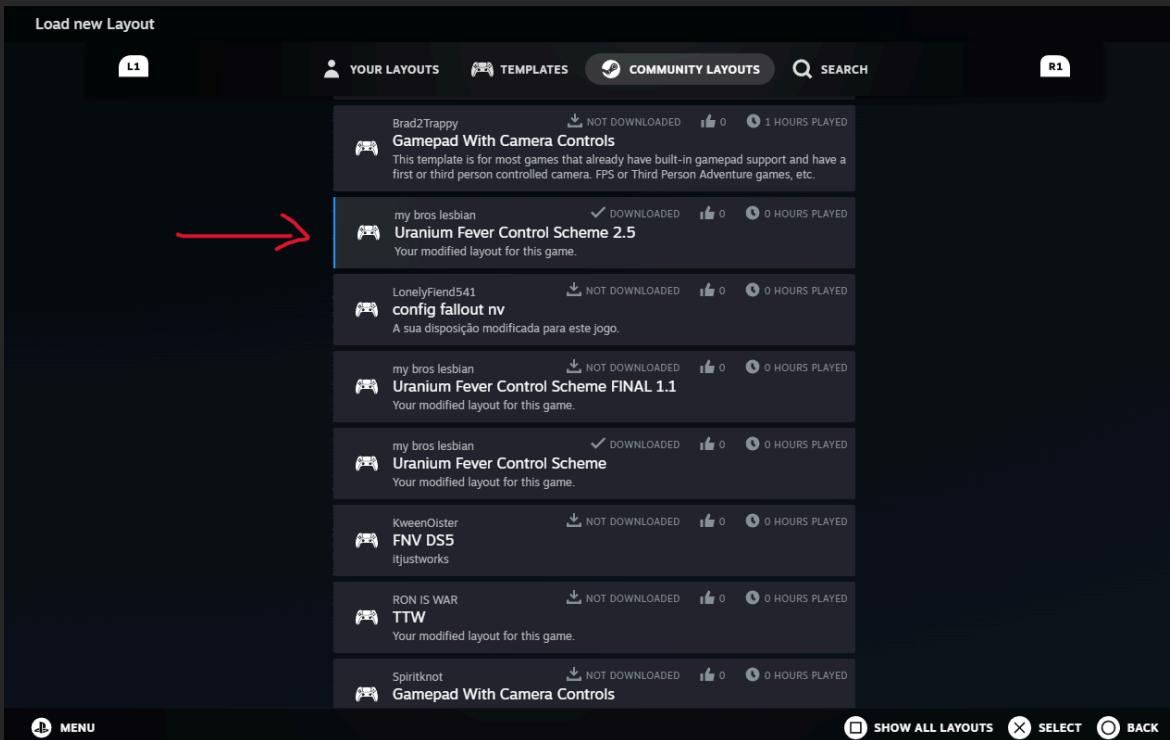

**Click on the bar that has the controller icon next to your username:
(mine is the controller scheme since I selected it already)**

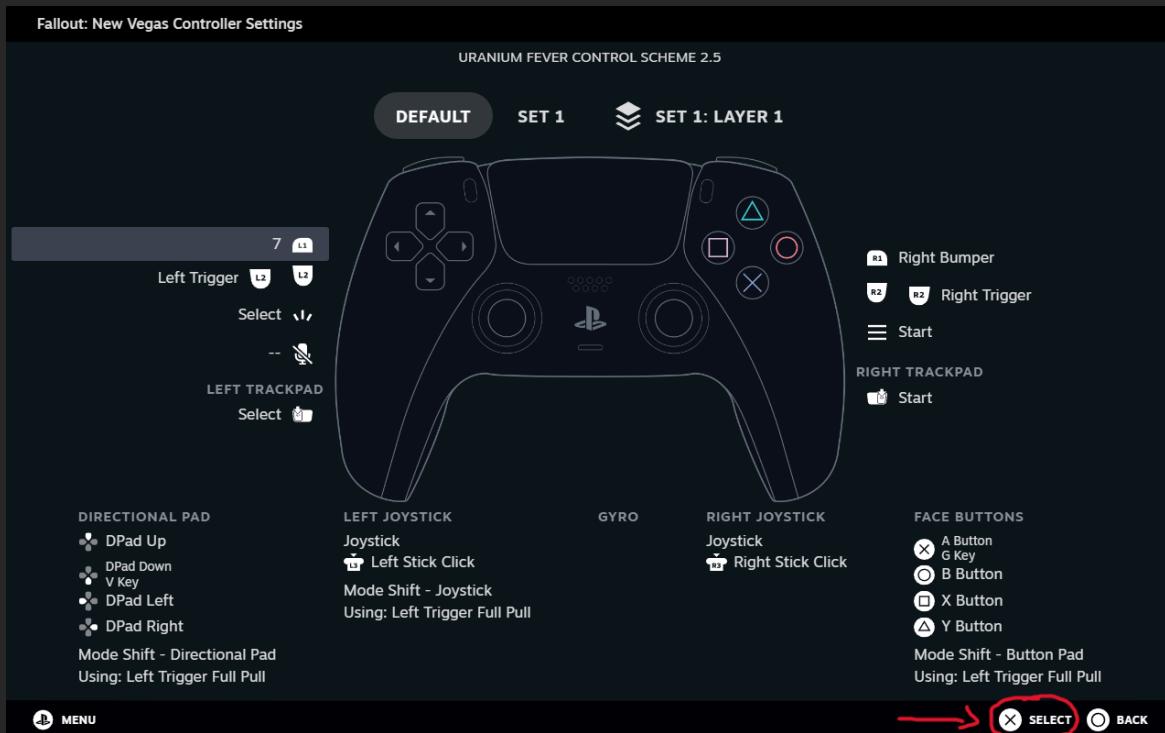

Click on Community Layouts in the top bar:

Scroll down and click on Uranium Fever Control Scheme 2.4:

Click on **Apply Layout** (or optionally use designated button prompt) on the bottom bar:

Click on **Back** (or optionally use designated button prompt)

- Run your game and enter the **settings** from the main menu
- Select **Controls**, then **Action Mapping**

Scroll down with your controller and select **Sneak. Press your right stick (RS/R3):**

Forward	19
Back	20
Strafe Left	23
Strafe Right	22
Attack	(RT)
Activate	(A)
Block	(LT)
Ready/Reload	(X)
Sneak	(LS)
Run	--
Always Run	--
Auto Move	--

Scroll down and select **Change View. Press escape (ESC) on your keyboard unmapping this button:**

Attack	(RT)
Activate	(A)
Block	(LT)
Ready/Reload	(X)
Sneak	(RS)
Run	--
Always Run	--
Auto Move	--
Jump	(Y)
Change View	--
Pip-Boy	(B)
Wait	(C)

Scroll down and select **Ammo Swap. Press escape (ESC) on your keyboard unmapping this button:**

Scroll down and select **Grab**. Press (RB/R1) mapping this button:

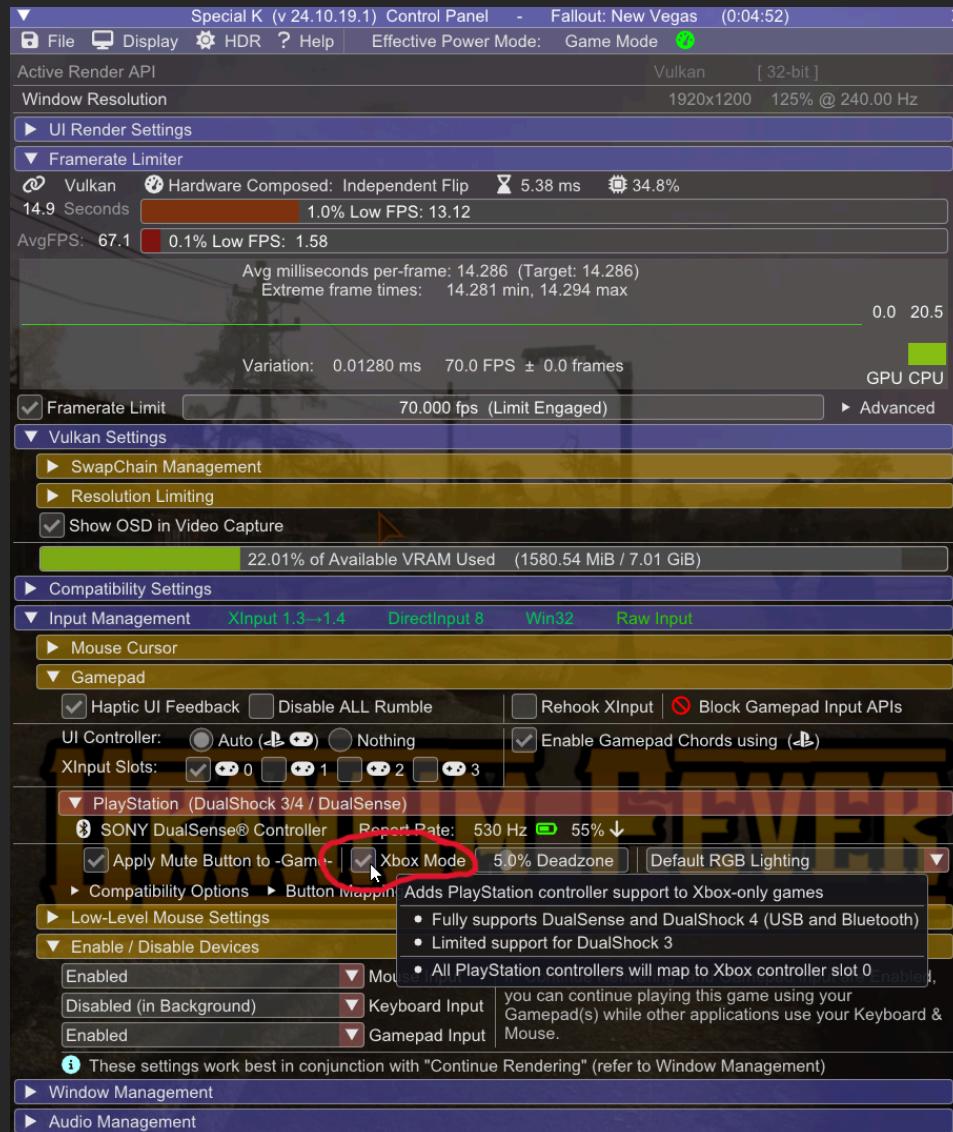

Scroll down and select **VATS**. Press escape (ESC) on your keyboard unmapping this button:

For Special K users with non-Xbox controllers:

- Open Special K menu (CTRL + SHIFT + BACKSPACE)

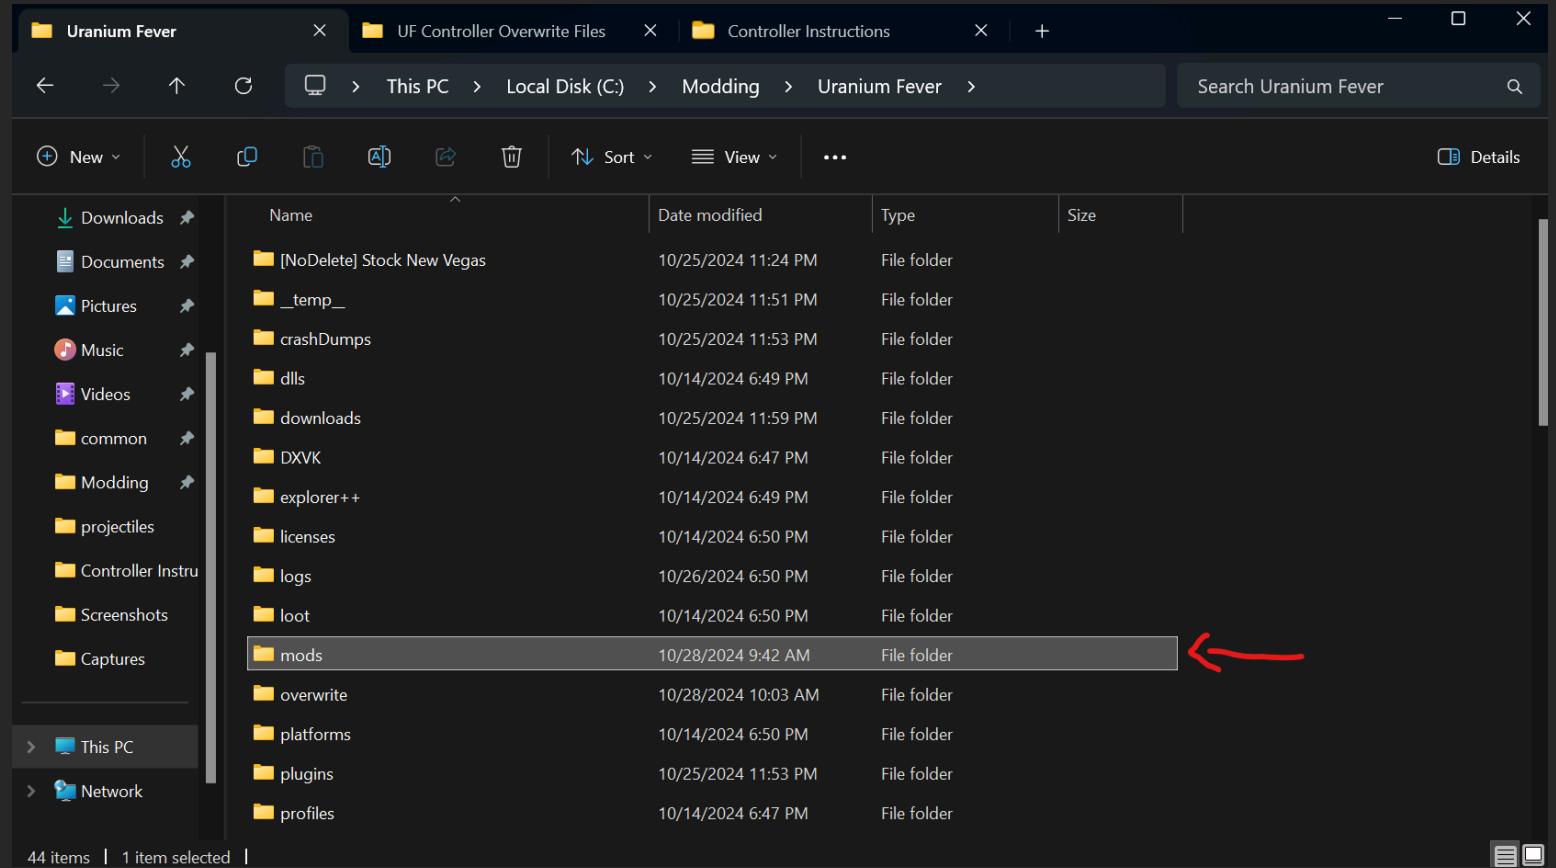

- Enable Xbox Mode by checking this box

You may or may not have to re-enable the Xbox 360 controller under Settings -> Controls again

Extract or copy/paste folders from UF Controller Instructions zip file into:

Uranium Fever\mods

Overwrite or copy & replace when asked

You're all set up to play Uranium Fever with your controller!

Controller controls are primarily normal usage as with vanilla

Character Movement = Left Stick

Camera Movement = Right Stick

Activate = A/Cross

Block/Aim = LT/L2

Attack/Fire = RT/R2

Ready/Reload = X/Square

Jump = Y/Triangle

Wait = Options/Share

Start Menu = Start

Pipboy = B/Circle

Pipboy Light = Hold B/Circle

Grab = RB/R1

Now here's where the custom mappings come in

In the pause menu screen these buttons will open the following:

Select/Options = **Main and Pause Menus Overhaul** (options to adjust nearly every aspect of all menus)

LT/L2 + DPAD LEFT = **Mod Configuration Menu**

X/Square = **Achievements Guide**

Y/Triangle = **Notifications Log**

LS/L3 is the standard sprint button. The option for toggle/hold button can be configured in the Mod Configuration Menu under Enhanced Movement.

LT/L2 + X/Square is also the R key on the keyboard. Any actions that require the R key can be made with LT/L2 + X/Square.

LT/L2 + DPAD LEFT is now the mapping for LB/L2. To access MCM use this button combination.

Long pressing A/Cross is also the G key on the keyboard. Any actions that require the G key can be made with long pressing A/Cross.

Long pressing DPAD DOWN is mapped to use the V key on the keyboard. This activates Bullet Time.

LT/L2 + DPAD RIGHT changes your POV (first to third person and vice-versa). Hold and use the right stick to view your character and pushing the stick forward/backward will increase/decrease the camera's closeness to your character in 3rd person.

LB/L1 is now the dedicated key for the Weapon Hwheel.

Whilst aiming, holding down the left stick (LS/L3) will now hold your breath for reduced sway.

Holding **DPAD LEFT** will open your quick select weapon menu. Use the right stick to scroll through and select your weapon.

Holding **DPAD RIGHT** will open your medical consumables menu. Use the right stick to scroll through and select the item you would like to use.

Holding **DPAD UP** will open your quick select throwables menu. Use the right stick to scroll through and select the item you would like to use.

With Enhanced Movement you are now able to go prone. Single pressing **right stick (RS/R3)** will crouch and long pressing will go prone.

Whilst aiming down sights with a scoped weapon pressing **DPAD UP** will zoom in and conversely pressing **DPAD DOWN** will zoom out the scope.

L1/L2 + A/Cross will open containers' menus to transfer between your inventory and the container.

Pressing **RB/R1** over any water source will bring up the refill water menu (you must have empty bottles).

Holding **RB/R1 + long pressing B/Circle** while wearing applicable armor/apparel will change vision modes (night vision, thermal).

Holding **RB/R1 + DPAD UP** will open the tracked quests log.

Holding **RB/R1 + DPAD DOWN** will hide/show the quest log in the top right UI.

Holding **RB/R1 + DPAD LEFT** will clear your actively followed quest.

Holding **RB/R1 + DPAD RIGHT** will change your actively followed quest.

LT/L2 + long pressing A/Cross will open the Companions Control and Command menu. Use DPAD UP and DOWN to navigate the menu and DPAD RIGHT to select. In the companion inventory menu press X/Square to force equip any weapon or armor/apparel you would like your companion to use.

More commands can be followed in the image below from the mod's page (note the activate button is now LT/L2 + long pressing A/Cross)

Activating the CC&C interface - M/K: Hold 'C' key, CT: Hold 'A' button for one second.

SELECT - M/K: Mouse wheel button, CT: D-Pad right.

SCROLL - M/K: Mouse wheel up/down, CT: D-Pad up/down.

SWITCH - M/K: Right mouse button, CT: D-Pad left.

* The above are the default controls. Different controls can be configured via the MCM control-panel.

Companions Bar:

- Scroll between companions - **SCROLL**
- Open the Commands Bar - **SELECT**
- Open the Companion Settings Panel - Hold **SELECT** for one second
- Move a companion up/down - **SCROLL** while holding **SWITCH**

Commands Bar:

- Scroll between commands - **SCROLL**
- Select a command - **SELECT**
- Command all companions - Hold **SELECT** for one second
- Move a command up/down - **SCROLL** while holding **SWITCH**
- Return to the Companions Bar - **SWITCH**

Companion Settings Panel:

- Scroll between settings - **SCROLL**
- Select a setting - **SELECT**
- Go one menu back - **SWITCH**

More keyboard keybinds can be viewed by pressing K in the main menu.

From all of us in the **Uranium Fever Team**, we sincerely hope you enjoy!
